MAAJ SHAIKH

AWS Network Engineer | AWS Cloud Engineer

Pune, Maharashtra 412207 • maaj.shaikh97@gmail.com • +91 77759 48688

PROFESSIONAL SUMMARY

AWS network and cloud engineer with 4 years of experience building and running AWS networks. Designs multi-account, hub-and-spoke architectures on AWS Transit Gateway, connects on-premises networks to AWS over site-to-site VPN, and runs Palo Alto Networks VM-Series firewalls for centralized traffic inspection. Provisions network infrastructure with Terraform through CI/CD pipelines, so changes are reviewed, repeatable and version-controlled.

TECHNICAL SKILLS

AWS Networking: VPC design and CIDR planning, subnets, route tables, AWS Transit Gateway, Site-to-Site VPN, Internet and NAT gateways, Route 53, CloudFront

Network Security: Palo Alto Networks VM-Series (security policies, NAT rules), Security Groups, NACLs, traffic segmentation

Networking Fundamentals: TCP/IP, subnetting, routing, IPsec, BGP, DNS, NAT

Multi-Account AWS: AWS Organizations, cross-account IAM roles, IAM policies

Infrastructure as Code & CI/CD: Terraform (modules, remote state on S3 with DynamoDB locking), AWS CodePipeline, CodeBuild, CodeDeploy, Jenkins, GitHub Actions

AWS Services: EC2, S3, Lambda, API Gateway, RDS, CloudWatch, CloudTrail, SNS, Secrets Manager

Containers & Scripting: Docker, Amazon ECS, Python, YAML, JSON

Operating Systems & Tools: Amazon Linux, Ubuntu, CentOS, ServiceNow, Jira

PROFESSIONAL EXPERIENCE

DevOps Engineer | Randstad Digital Private Limited, Chennai **Dec 2025 – Present**

- **Multi-account hub-and-spoke network:** Built the AWS network in a hub-and-spoke model: a central network account hosts AWS Transit Gateway, and workload VPCs in spoke accounts attach to it, keeping routing and inspection in one place.
- **IP planning:** Planned VPC CIDR ranges and subnet layouts across accounts to avoid overlaps and leave room for new workloads.
- **Hybrid connectivity:** Set up site-to-site IPsec VPN between the on-premises network and AWS, including customer gateway configuration, tunnel setup and route propagation to spoke VPCs.
- **Palo Alto firewalls:** Provisioned Palo Alto Networks VM-Series firewalls in a dedicated inspection VPC and routed spoke-to-spoke and on-premises traffic through them for centralized inspection; managed security policies and NAT rules.
- **Layered security:** Enforced Security Groups and NACLs alongside the firewalls, and used IAM roles and policies to limit who and what can change the network.
- **Terraform:** Wrote reusable Terraform modules for VPCs, subnets, route tables, Transit Gateway attachments, VPN connections and firewall instances.
- **CI/CD for infrastructure:** Built a pipeline on AWS CodePipeline and CodeBuild that runs terraform plan for review and applies approved changes across accounts through cross-account IAM roles, with remote state in S3 and DynamoDB locking.
- **Monitoring and troubleshooting:** Built CloudWatch dashboards and alarms; troubleshot connectivity across VPCs, VPN tunnels and firewall rules.
- **Containers:** Ran containerized workloads on Amazon ECS with Docker for scalability and high availability.
- **Incidents and change:** Handled incidents and change requests in ServiceNow and Jira within SLA, working with development, QA and operations teams.

Cloud Operations Engineer | TEXTCODE Technologies Pvt. Ltd., Pune **Oct 2022 – Dec 2025**

- **AWS operations:** Maintained production AWS infrastructure, including EC2, RDS (MySQL and PostgreSQL) and CloudFront.
- **L1/L2 support:** Resolved connectivity and access issues for EC2 and RDS (security groups, route tables, subnet placement) and escalated complex cases to senior engineers.
- **Monitoring:** Set up automated CloudWatch alarms that flagged performance problems before they became outages.
- **Serverless:** Built and managed API Gateway and Lambda functions for serverless applications.

EDUCATION

Bachelor in Engineering | SIET, Akluj, Maharashtra

LANGUAGES

English, Hindi, Marathi
